1. Methods

2. Results

3. Conclusion and next steps

1 METHODS

1 Correcting for bias

1. p : probability for paper i to be selected for manual download
 2. $p(i | \text{Year}) = \Delta[f_{\text{query}}(\text{Year}) - f_{\text{corpus}}(\text{Year})]$
 3. $p(i | \text{Source}) = \Delta[f_{\text{query}}(\text{Source}) - f_{\text{corpus}}(\text{Source})]$
 4. $p(i | \text{Year}; \text{Source}) = p(i | \text{Year}) \cdot p(i | \text{Source})$
 5. Systematic sampling with unequal probabilities [Madow, 1949]
- \Rightarrow Unbiased selection of articles with inclusion probabilities p taking into account evidenced bias between query and corpus

1 Correcting for bias in year

Example : Portuguese corpus

1 Correcting for bias in source

Example : Portuguese corpus

2 RESULTS

2 Baseline : English results - Source

2 Portuguese results - Source

Before download party

2 Correcting for year : before download party

3 CONCLUSION AND NEXT STEPS

3 Conclusion and next steps

- Bias successfully corrected
- Added
 - 186 Portuguese articles (x 62%);
 - 672 Spanish articles (x 550 %)
- Return rate between query and corpus :
 - English : 72%
 - Portuguese : 63%
 - Spanish : 56%
- Number of articles :
 - English : 21 197
 - Portuguese : 486 articles (75 to reach English return rate, x 15%)
 - Spanish : 794 articles (225 to reach English return rate, x 28%)
- Good enough or another download party ?
(300 papers to download vs. 1 158)
